FROM THE PRESIDENT

I machined my first Star Gear 35 years ago, and over the years we have built a First-Class manufacturing shop. It is important that we produce these products ourselves so we can control the quality, timing and costs. It is equally important that when you contact Northwest Dryer you reach

someone who is knowledgeable about your business, and your machinery. You have relied on us for 4 decades to keep your dryers running, it's a rich history, and we appreciate the responsibility. Northwest Dryer & Machinery specializes in Replacement and Upgrade Parts for Industrial Dryers and other Wood Product Processing Equipment.

We produce, buy, sell and stock parts for Veneer Dryers, Gypsum Dryers and Fiberboard Dryers. Look to us for rapid delivery of the commonly used parts such as 8T Hook Tooth Sprockets, Star Gears, Door Seals, and more.

In our 47,000 square foot, CNC equipped, machine shop we have the capability to fabricate hard-to-find parts quickly and accurately. Northwest Dryer has large item Machining capabilities with a Vertical Mill capable of machining and drilling up to 10' x 32' plates. The Lathes can take up to 4' diameter x 60' long shafts. Our CNC machines are staffed by in-house programmers and experienced machinists to create any custom parts you need to keep your production going.

Our extensive experience makes Northwest Dryer an excellent source of dryer design, maintenance, and upgrades.

I look forward to working with you-
You are always welcome to call or drop by! Here's to the next 40 years!

Scott Wenzel

DRYER DOORS

We designed Dryer Doors with a "Floating Skin" to replace worn-out doors. We use special seam to fold the sheet metal skin over a Heavy Duty frame, this allows the skin to expand and contract freely- instead of pulling and warping over time.

Combined with our "Lift-Off Latch System" these doors will pay for themselves in energy savings and reduced pitch buildup at leaky seams.

LIFT-OFF DOOR LATCH SYSTEM

OUR ONE-HAND DOOR HINGE/LATCH SYSTEM IS PRECISION MACHINED FROM HI-TENSILE STRENGTH STEEL. ALL PIECES ARE LASER-CUT AND PRECISION BORED FOR A PERFECT FIT AND LONG LIFE! OUR DOORS SEAL, AND STAY SEALED!

Our system LIFTS the door off the doorposts Before it swings open, Saving your door seal. Then it closes on both sides of the door-Sealing tightly ALL-AROUND.
